

Abstract

Disclosed is a computer program product and method that operate an enterprise information system of at least one server and a number of personal computers communicating with each other and with the server. The program product and method create object models that have a consistent structure from and about information assets that are of diverse types and come from diverse software, and display browse cards about the information assets in a time-ordered stream, together with glance views related to the document object models. The glance views are displayed essentially in real time in response to passing a cursor over respective browse cards on the display.
